

## MATERIALS TESTING

Element Kitchener is an internationally accredited, CGP approved, well-rounded materials testing laboratory servicing the automotive, military, aerospace and consumer goods industries. The core of testing services offered center on the properties and durability of interior and exterior

---

# DELIVERING INNOVATIVE PRODUCT TESTING AND CERTIFICATION SOLUTIONS

## PHYSICAL, MECHANICAL, SURFACE PROPERTY TESTING

- AATCC Gray Scale Evaluations
- Abrasion
- Car Wash
- Chemical Resistance
- Clean-ability
- Coating Thickness
- Color Evaluation
- Crocking
- Cure Test
- Five Finger Scratch
- Flexibility

## DURABILITY AND FATIGUE

- |                                       |                                |                                       |  |                              |
|---------------------------------------|--------------------------------|---------------------------------------|--|------------------------------|
| • Combined Durability & Environmental | • Experimental Stress Analysis | • Highly Accelerated Life Test (HALT) | • Mechanical Durability                    | • Structural Testing         |
| • Component Evaluation                | • Flammability, FMVSS302       | • Life Cycle Endurance                | • Pressure Cycling / Environmental Fatigue | • Vehicle Seat Cycle Testing |
|                                       | • Flow Measurement             | • Load Vs De ection                   | • Servo Hydraulic Fatigue                  |                              |

## ELEMENT KITCHENER DYNAMICS TESTING

- |  |                                    |                    |                  |             |
|--|------------------------------------|--------------------|------------------|-------------|
| • Combined Vibration and Environmental | • HALT/HASS                        | • Random           | • Sine-on-Random | • SRS Shock |
| • Classic Shock (Half-Sine, Sawtooth)  | • Linear Acceleration (Centrifuge) | • Random-on-Random | • Sine Sweep     |             |
|  |                                    | • Sine Dwell       | • Sound Testing  |             |

## ELEMENT KITCHENER CHEMICAL AND FAILURE ANALYSIS TESTING

- |                              |                          |                                  |                                       |   |
|------------------------------|--------------------------|----------------------------------|---------------------------------------|---|
| • Contamination Analysis     | • GC/MS With Headspace   | • SEM/EDS                        | » Measurement and Distribution        | » Cure                                    |
| • Failure Analysis           | • HPLC                   | » Energy Dispersive Spectrometer | » Semi Quantitative Chemical Analysis | » DSC - Differential Scanning Calorimetry |
| • Fourier Transform Infrared | • Microscopic Evaluation | » Fractography                   | » Verification of Coating Types       | » Melt Flow Indexer                       |
| • GC/MS With Gerstel TDS     | • O -Gas Analysis        | » High Magnification Imaging     | • Thermal Analysis                    | » Melt Point                              |
|                              | • VOC Testing            | » Identification of Contaminants | » Compositional Analysis              | » Oxidative Induction Time                |
|                              | • Volumetric Analysis    |                                  | » Crystallinity                       | » Temp                                    |
|                              |                          |                                  |                                       | » TGA                                     |
|                              |                          |                                  |                                       | » Thermal Stability                       |

## ELEMENT KITCHENER MECHANICAL TESTING

- |   |   |                                      |   |                                |
|---|---|--------------------------------------|---|--------------------------------|
| • Adhesion of Painted and Metallic Coatings | • Compressive Strength of Foam, Plastics and Metals | • Flexural Bending (3 Point) Modulus | • IZOD                                  | • Tensile Properties           |
| • Breaking Strength of Plastics and Metals  | • Density and Specific Gravity                      | • Hardness, Rockwell, Knoop/Vickers  | • Load Testing of Components/Assemblies | • Torque                       |
| • Brittleness                               |   | • Heat Treat Verification            | • Peel Testing                          | • Weld Quality/Strength        |
| • Coating Weight                            |   | • Impact Testing                     | • Shear Strength                        | • Welding and Brazing Analysis |
